This individual will manage inspection, preventive maintenance, component inventory, and optimization of the energy distribution systems on the UNIVERSITY OF GEORGIA CAMPUS. UGA currently owns and operates the following energy distribution systems: high voltage electrical (12.47/7.2kV), steam (100 psi), natural gas, chilled water, and hot water. This individual will provide support troubleshooting problems and outage restoration of these systems as well.

**EDUCATION:** Associate's degree in engineering technology or utility management related field ; OR an equivalent combination of education, training, and experience. BA or BS preferred in engineering technology or utility management related field.

**EXPERIENCE:** Ten (10) years of experience working directly with utility distribution systems, including inspection and maintenance responsibilities.

**KNOWLEDGE, SKILLS AND ABILITIES:** Employee must be able to identify potential maintenance deficiencies in utility systems which, if uncorrected, could cause system failures.

**PHYSICAL DEMANDS:** Must be able to stand, stoop, bend, squat throughout shift.

Candidates should submit resume and complete application via University of Georgia's employment site at [www.ugajobsearch.com](http://www.ugajobsearch.com)
